

MULTI-GUN VARIABLE PRESSURE WASHER

VFD Controlled to provide constant pressure at the desired gallons per minute at each individual wand

Simple to operate!

INSTANT ON: Pull the trigger on the wand and go to work. Release the trigger and the unit shuts down. No need for remote controls or wiring, or running to the pump to turn it on or off.

When you're not working, neither is the Multi-Gun Variable machine, so you're not wasting money. Multi-Gun Variable Wash design does not require the motor to run at its maximum speed 100% of the time, resulting in reduced energy costs.

Simple to Maintain!

The Multi-Gun Variable Pressure Washer is designed to protect your investment.

The pump and motor run below their service factors providing less wear and tear resulting in longer life.

If detergents are used they are injected downstream reducing wear on the pump seals.

The motor is protected from ground fault short circuit phase loss and phase imbalance, overload, under voltage and over voltage.

Convenience, Efficiency, Reduced Energy Costs and Longer Pump and Motor Life.

VWS31215 12 GPM @ 1500 PSI with 15 Hp Motor 480 3 Phase

12 gpm models will handle up to 3 guns @ 4 GPM

VWS32015 20 GPM @ 1500 PSI with 25 Hp Motor 480 3 Phase

20 gpm models will handle up to 5 guns @ 4 GPM
