

# QUICK SAND

## TECHNICAL DATA SHEET

**Description:** *HYDRO-CHEM'S Quick Sand is a unique formulation for the dissolving of cementitious materials. This formula contains NO organic or inorganic acids, but is a very low pH. This formula has been designed with a relatively high viscosity so that it will cling on the surface with delayed drying times to allow the product time to reverse the hardening of the cement.*

### Advantages:

- Does not contain any organic or inorganic acids (such as hydrochloric, phosphoric, sulfuric, hydrofluoric, citric or glycolic acids).
- May be shipped as an unregulated product.
- Thickened to enhance dwell and lengthen drying time.

### Usage Instructions:

Apply directly to cement spots that need to be removed.

**NOTE:** This is a mild solution, and requires a long dwell time. Allow product to remain on surface for several hours. If possible a rewetting with Quick Sand after a couple of hours might help. Before removal, rub small area with finger or brush to see if the cement is all dissolved. If not reapply and wait longer. When ready for removal, use pressure washer if possible. If not, a garden hose may be used and light brushing will help to remove softened cement.

No dilution required, use straight.

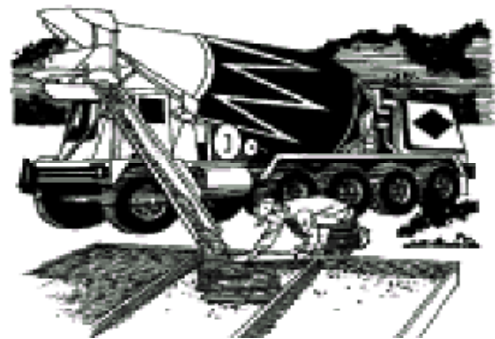

### Specifications:

Physical Form:	Viscous yellow liquid
Odor:	mild soapy
Solubility:	completely in water
Foam:	n/a

### Caution:

If accidentally splashed in eyes, wash with water for 15 minutes. Wash with water to remove from skin.
