Horsepower	3.7 HP	0.8 HP
Weight	247 lb	30 lb

General Info

The purpose of this manual is to provide the necessary information to install and operate the Hydro-Chem equipment to exceed your defined expectation.

The Air Compressor will come ready to assemble, plumb, and wire to.

Installation & Set-Up

The water heater is typically placed in the mechanical equipment room where shown on the project MEP, near its power source. Any product specific start-up instructions are typically included with the air compressor itself. Refer to the project MEP for plumbing specifics that may vary.

Maintenance & Troubleshooting

The operation manuals for the compressors should be referred to for regular maintenance schedules and instructions. In depth troubleshooting tables are also found within the manufacturer manual.
